(54) MODIFIED ACARIAN  
MAIN ALLERGEN AND ITS  
PRODUCTION

## (57) Abstract:

**PURPOSE:** To obtain the subject allergen useful as the therapeutic agent for allergic diseases caused by acarian allergen by employing a gene coding a modified Der-fil produced by substituting a specific amino acid residue of an acarian main allergen Der-fil with alanine.

**CONSTITUTION:** A prokaryote or eucaryote is transformed with a replicated vector containing a gene coding a modified Der-fil, and subsequently cultured. A modified acarian main allergen is collected from the culture product. The modified acarian main allergen lowers the IgE antibody-binding activity, and inhibits wild type Der-fil binding to the IgE antibody. The modified Der-fil is produced by substituting alanine for one of the No.4, 8, 7, 10, 11, 12, and 127 amino acids of acarian main allergen Der-fil. A gene coding the acarian main allergen Der-fil has a DNA sequence of the formula, etc.
